## True or False? <br> Linear Inequalities

For each statement, circle the correct response.

3
The integers 2,3 and 4 all satisfy the inequality $x<4$

True
False
$4 \begin{gathered}\text { The integers }-1,0 \text { and } 1 \text { are the only integers to } \\ \text { satisfy the inequality }-1<x<2\end{gathered}$ satisfy the inequality $-1 \leq x<2$

True
False

## 5

The only integer to satisfy both inequalities $-1 \leq x<4$ and $2<x \leq 6$ is 3.

True
False
6

> The solution to the inequality $x-3>5$ $$
\text { is } x>2
$$

True
False

7 The solution to the inequality $-4 x \leq 20$
is $x \geq-5$
True
False

8
The solution to the inequality $20>3 x-1$ is $x<7$

True
False
$9 \quad \begin{gathered}\text { The integers }-3,-2 \text { and }-1 \text { all satisfy the inequality } \\ -2 \leq x+1<0\end{gathered}$
True
False

| 10 | The solution to the inequality $-8 \leq 8 x<56$ <br> is $-1 \geq x>7$ | True | False |
| :---: | :---: | :---: | :---: |

| 11 | The solution to the inequality <br> $2 x-4<6-3 x \leq 21$ <br> is $-5 \leq x<2$ | True | False |
| :---: | :---: | :---: | :---: |
