

Enlargements Using Matrices

(a)	(b)	(c)
<p>By considering the unit square, determine the matrix which describes an enlargement about the origin with scale factor 3.</p> 	<p>Describe fully the single transformation represented by the matrix $\begin{pmatrix} \frac{5}{2} & 0 \\ 0 & \frac{5}{2} \end{pmatrix}$</p>	<p>Use matrix algebra to show that an enlargement of scale factor 2 about $(0, 0)$, followed by an enlargement of scale factor 1.5 about $(0, 0)$ is equivalent to an enlargement of scale factor 3 about $(0, 0)$.</p>
(d)	(e)	(f)
<p>The point $(-5, 3)$ is mapped onto the point (a, b) when enlarged by a scale factor 2 about the origin. Using matrix algebra, find the values of a and b.</p>	<p>The unit square OABC with coordinates $O(0, 0)$, $A(0, 1)$, $B(1, 1)$ and $C(1, 0)$ is mapped to $OA'B'C'$ under matrix $\begin{pmatrix} -5 & 0 \\ 0 & -5 \end{pmatrix}$. Use matrix algebra to find the coordinates of A', B' and C'.</p>	<p>The point (c, d) is mapped onto the point $(-1, -4)$ when enlarged by a scale factor 0.5 about the origin. Using matrix algebra, find the values of c and d.</p>
(g)	(h)	(i)
<p>Use matrix algebra to show that an enlargement of scale factor 2 about $(0, 0)$, followed by an enlargement of scale factor -0.5 about $(0, 0)$ is the same as a rotation of 180° about the origin.</p>	<p>The point $(a, 3)$ is mapped to the point $(6, 2a)$ when enlarged with scale factor b about the origin. Use matrix algebra to find the possible values of a and b.</p>	<p>The point $(x - 4, y)$ is mapped to the point $(2y, 2x - 18.5)$ when transformed under the matrix $\begin{pmatrix} -5 & 0 \\ 0 & -5 \end{pmatrix}$. Find the values of x and y.</p>
