

Equating Coefficients in Vectors

Find the values of λ and μ by equating coefficients of \mathbf{a} and \mathbf{b} .

- (a) $4\mathbf{a} + \lambda\mathbf{b} = \mu\mathbf{a} + 6\mathbf{b}$
 (b) $\lambda\mathbf{a} - 5\mathbf{b} = -2\mathbf{a} + \mu\mathbf{b}$
 (c) $\lambda\mathbf{a} + \mu\mathbf{b} = 2\mathbf{a} + 6\mathbf{b} + 3\mathbf{a} - 3\mathbf{b}$
 (d) $-3\mathbf{a} + \lambda\mathbf{b} = 2\mathbf{a} - \mathbf{b} + \mu\mathbf{a} + 5\mathbf{b}$
 (e) $2(2\mathbf{a} - \mu\mathbf{b}) + 3\mathbf{a} + 10\mathbf{b} = \lambda\mathbf{a} + 6\mathbf{b}$

- (a) $\mu = 4, \lambda = 6$
 (b) $\lambda = -2, \mu = -5$
 (c) $\lambda = 5, \mu = 3$
 (d) $\mu = -5, \lambda = 4$
 (e) $\lambda = 7, \mu = 2$

In the vector diagrams shown, find the values of λ and μ .

(a)

(b)

(a) $\lambda = 7, \mu = -1$

(b) $\lambda = -9, \mu = 5$

In the vector diagrams shown, find the values of λ and μ .

(a)

(b)

(a) $\lambda = 9, \mu = 3$

(b) $6\mathbf{a} + (1-\lambda)\mathbf{b} = (\lambda+\mu)\mathbf{a} + (2\mu-1)\mathbf{b}$

$$6 = \lambda + \mu$$

$$1 - \lambda = 2\mu - 1$$

$$\lambda = 10, \mu = -4$$
