

## Rotations Using Matrices

Rotations Using Matrices		
<p><b>(a)</b></p> <p>By considering the unit square, determine the matrix which describes a rotation <math>90^\circ</math> clockwise about the origin.</p> <div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> <math display="block">\begin{pmatrix} 0 &amp; 1 \\ -1 &amp; 0 \end{pmatrix}</math> </div>  </div>	<p><b>(b)</b></p> <p>Describe fully the single transformation represented by the matrix <math>\begin{pmatrix} 0 &amp; -1 \\ 1 &amp; 0 \end{pmatrix}</math></p> <div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> <math display="block">\begin{pmatrix} 0 &amp; -1 \\ 1 &amp; 0 \end{pmatrix}</math> </div>  </div> <p style="text-align: center; color: red;"><i>Rotation <math>90^\circ</math> anti-clockwise about origin</i></p>	<p><b>(c)</b></p> <p>By considering the unit square, determine the matrix which describes a rotation <math>180^\circ</math> about the origin.</p> <div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> <math display="block">\begin{pmatrix} -1 &amp; 0 \\ 0 &amp; -1 \end{pmatrix}</math> </div>  </div>
<p><b>(d)</b></p> <p>The point <math>(1, -6)</math> is mapped onto the point <math>(a, b)</math> when rotated <math>90^\circ</math> anti-clockwise about the origin. Using matrix algebra, find the values of <math>a</math> and <math>b</math>.</p> <div style="text-align: center; color: red;"> <math display="block">\begin{pmatrix} 0 &amp; -1 \\ 1 &amp; 0 \end{pmatrix} \begin{pmatrix} 1 \\ -6 \end{pmatrix} = \begin{pmatrix} a \\ b \end{pmatrix}</math> <math display="block">a = 6, b = 1</math> </div>	<p><b>(e)</b></p> <p>The point <math>(c, d)</math> is mapped onto the point <math>(2, 4)</math> when rotated <math>270^\circ</math> anti-clockwise about the origin. Using matrix algebra, find the values of <math>c</math> and <math>d</math>.</p> <div style="text-align: center; color: red;"> <math display="block">\begin{pmatrix} 0 &amp; 1 \\ -1 &amp; 0 \end{pmatrix} \begin{pmatrix} c \\ d \end{pmatrix} = \begin{pmatrix} 2 \\ 4 \end{pmatrix}</math> <math display="block">c = -4, d = 2</math> </div>	<p><b>(f)</b></p> <p>A triangle with vertices at <math>(1, 1)</math>, <math>(5, 2)</math> and <math>(4, -1)</math> is rotated <math>180^\circ</math> about the origin. Use matrix algebra to find the coordinates of the vertices of the rotated triangle.</p> <div style="text-align: center; color: red;"> <p><i>Vertices <math>(-1, -1)</math>, <math>(-5, -2)</math> and <math>(4, -1)</math></i></p> </div>
<p><b>(g)</b></p> <p>Use matrix algebra to show that a rotation of <math>90^\circ</math> clockwise about the origin, followed by a rotation of <math>180^\circ</math> is equivalent to a rotation of <math>90^\circ</math> anti-clockwise about the origin.</p> <div style="text-align: center; color: red;"> <math display="block">\begin{pmatrix} -1 &amp; 0 \\ 0 &amp; -1 \end{pmatrix} \begin{pmatrix} 0 &amp; 1 \\ 1 &amp; 0 \end{pmatrix} = \begin{pmatrix} 0 &amp; -1 \\ 1 &amp; 0 \end{pmatrix}</math> </div>	<p><b>(h)</b></p> <p>The point <math>(a, 6)</math> is mapped onto the point <math>(b, -4)</math> following a rotation of <math>90^\circ</math> anti-clockwise about the origin. Use matrix algebra to find the values of <math>a</math> and <math>b</math>.</p> <div style="text-align: center; color: red;"> <math display="block">\begin{pmatrix} 0 &amp; -1 \\ 1 &amp; 0 \end{pmatrix} \begin{pmatrix} a \\ 6 \end{pmatrix} = \begin{pmatrix} b \\ -4 \end{pmatrix}</math> <math display="block">a = -4, b = -6</math> </div>	<p><b>(i)</b></p> <p>The point <math>(x, 2y + 6)</math> is mapped onto the point <math>(2x, y - 7)</math> following a rotation of <math>90^\circ</math> clockwise about <math>(0, 0)</math>. Use matrix algebra to find the values of <math>x</math> and <math>y</math>.</p> <div style="text-align: center; color: red;"> <math display="block">\begin{pmatrix} 0 &amp; 1 \\ -1 &amp; 0 \end{pmatrix} \begin{pmatrix} x \\ 2y + 6 \end{pmatrix} = \begin{pmatrix} 2x \\ y - 7 \end{pmatrix}</math> <math display="block">x = 5, y = 2</math> </div>
