| Make $x$ the subject of the formula $y^{2}=\frac{a x-c}{x+1}$ | $y$ is inversely proportional to the cube root of $x$. When $x=27, y=2.5$. Find a formulae for $y$ in terms of $x$. | Prove that $(2 n+3)^{2}+(2 n-1)^{2}$ is even for all positive values of $n$ | The curve with equation $y=f(x)$ has a maximum point at $(2,7)$. Write down the coordinates of the maximum point of the curve with equation: <br> (i) $y=3 f(x)$ <br> (ii) $y=f(x-4)$ | $\begin{aligned} & f(x)=\frac{x}{2 x+3} \\ & g(x)=1-6 x \end{aligned}$ <br> Find $f g(x)$ in its simplest form |
| (f) | (g) | (h) | (i) | (j) |
| $\begin{aligned} & f(x)=\frac{2 x}{7}+1 \\ & \text { Find } f^{-1}(x) \end{aligned}$ | Solve $\frac{x-1}{2}+\frac{3}{x}=3$ | Solve $2 x^{2}-5 x>3$ | Here are the first five terms of a sequence: $4,7,10,13,16, \ldots$ Find the sum of the $6^{\text {th }}$ to the $50^{\text {th }}$ term of this sequence. | The curve $y=2 x^{2}+\frac{32}{x}$ has one stationary point. Find the coordinates of this point. |
